Left-commentary layout, dataframe, commentary, notification, warning message

To add a commentary section to your report you need to define a block of text and use HTML to add markup.

There's quite a bit of room in the left-commentary layout to support adding lengthy commentary and also adding a notification message to alert readers to specific points.

This is a page message

This is a notification

Plot layout, visualisation, commentary

To add a visualisation you need to use either the "plot" or "left-commentary" layouts, save the image to a file and pass in the filename to the "page_visualisation" argument. You will want to tweak the image size so it sits perfectly on your report page.
